TestOut Linux Pro — English 5.0.x

Objective Mappings:

TestOut Linux Pro CompTIA XK0-004

## Contents

This document contains four objective mappings.

| LabSim Section to Linux Pro Objective | 3  |
|---------------------------------------|----|
| Linux Pro Objective to LabSim Section |    |
| LabSim Section to XKO-004 Objective   | 16 |
|                                       | 10 |
| XK0-004 Objectives to LabSim Section  | 65 |

# **LabSim Section to Linux Pro Objective**

The Linux Pro course covers the following TestOut Linux Pro exam objectives:

| Section | Title                     | Objectives  |  |
|---------|---------------------------|---|--|
| 0.0     | Linux Pro Introduction    |   |  |
| 0.1     | Course Introduction       | View information about directories and files in the file system     Create, copy, move, and delete files in the file system |  |
| 0.2     | The TestOut Lab Simulator |   |  |
| 1.0     | Linux Overview            |   |  |
| 1.1     | Linux Introduction        |   |  |
| 2.0     | Using Linux               |   |  |
| 2.1     | The Linux Shell           | Configure and use Linux shell environments     View available shells  |  |
| 2.2     | Linux Help                | 1.1 Use command-line utilities  Get help with Linux command-line utilities  |  |
| 2.3     | Text Editors              | 2.2 Manage the file system  |  |

|      |  | Create, copy, move, and delete files in the file system   |
|------|--|---|
| 2.4  | Aliases                                      |   |
| 2.5  | Environment Variables                        | 1.2 Configure and use Linux shell environments  |
|      |  | Manage environment variables  |
| 2.6  | Shell Configuration Files                    |   |
| 2.7  | Redirection, Piping and Command Substitution |   |
| 2.8  | Directories                                  | 2.2 Manage the file system  |
|      |  | View information about directories and files in the file system Create, copy, move, and delete directories in the file system   |
| 2.9  | Files  | 2.2 Manage the file system  View information about directories and files in the file system  Create, copy, move, and delete directories in the file system  Create, copy, move, and delete files in the file system |
| 2.10 | Links  | 2.2 Manage the file system  Create and manage hard and symbolic link files  |
| 2.11 | Filesystem Hierarchy Standard (FHS)          |   |
| 2.12 | Locating and Searching Files                 |   |
| 2.13 | Text Stream Processing                       |   |

| 3.0 | Installation and Localization          |   |  |
|-----|--|---|--|
| 3.1 | Linux System Design                    |   |  |
| 3.2 | Linux Installation                     |   |  |
| 3.3 | Localization                           |   |  |
| 4.0 | Boot and Shutdown                      |   |  |
| 4.1 | Linux Boot Process                     |   |  |
| 4.2 | Bootloaders                            | 1.3 Manage system startup and shutdown  |  |
|     |  | Manage bootloader configurations  |  |
| 4.3 | systemd Boot Targets                   | Manage system startup and shutdown      Manage bootloader configurations     View and manage runlevels or boot targets for system services     Set the default system runlevel or boot target |  |
| 4.4 | System Services                        | Start, stop, and restart system services     Monitor and manage running processes   |  |
| 4.5 | System Shutdown                        | Manage system startup and shutdown     Shut down and restart the system   |  |
| 5.0 | Graphical User Interfaces and Desktops |   |  |
| 5.1 | Graphical User Interfaces              |   |  |

| 5.2 | Linux Desktops                |   |
|-----|-------------------------------|---|
| 5.3 | Remote Desktop                |   |
| 5.4 | Accessibility                 |   |
| 6.0 | Software Installation         |   |
| 6.1 | Red Hat Package Manager (RPM) | 1.5 Use package management  |
|     |                               | Install, remove, and update packages with the RPM command   |
| 6.2 | Online Package Installation   | 1.5 Use package management  |
|     |                               | Install, remove, and update packages with the RPM command Install, remove, and update RPM packages with DNF |
| 6.3 | Debian Package Manager (dpkg) |   |
| 6.4 | Shared Libraries              |   |
| 7.0 | Users and Groups              |   |
| 7.1 | User and Group Overview       | 4.1 Manage users and groups   |
|     |                               | Create and manage groups Create and manage user accounts Manage user passwords Manage user access           |
| 7.2 | User Management               | 4.1 Manage users and groups   |
|     |                               | Create and manage user accounts Manage user passwords   |

|     |                                 | Manage user access  |  |
|-----|---------------------------------|---|--|
| 7.3 | Group Management                | 4.1 Manage users and groups   |  |
|     |                                 | Create and manage groups  |  |
| 8.0 | Disk and File System Management |   |  |
| 8.1 | MBR Disk Partitions             | 2.1 Manage storage devices  |  |
|     |                                 | Create and manage disk partitions Create and manage swap partitions                                     |  |
| 8.2 | GUID Partitions                 | 2.1 Manage storage devices  |  |
|     |                                 | Create and manage disk partitions   |  |
| 8.3 | Logical Volume Manager          | 2.1 Manage storage devices  |  |
|     |                                 | Configure Logical Volume management   |  |
| 8.4 | File Systems                    | 2.1 Manage storage devices  |  |
|     |                                 | Create and manage disk partitions Create and manage disk file systems Create and manage swap partitions |  |
| 8.5 | Mounting File Systems           | 2.1 Manage storage devices  |  |
|     |                                 | Mount and unmount devices in the file system  |  |

| 8.6  | File System Maintenance |  |
|------|-------------------------|--|
| 8.7  | Disk Quotas             | 2.2 Manage the file system                                 |
|      |                         | Implement disk quotas                                      |
| 8.8  | Ownership               | 4.2 Manage user and group access                           |
|      |                         | Manage directory and file ownership for users and groups   |
| 8.9  | Permissions             | 4.2 Manage user and group access                           |
|      |                         | Manage directory and file permissions for users and groups |
| 8.10 | The umask Command       | 4.2 Manage user and group access                           |
|      |                         | Configure umask values                                     |
| 8.11 | Special Permissions     | 4.2 Manage user and group access                           |
|      |                         | Use special permissions                                    |
| 8.12 | Archive and Backup      | 2.2 Manage the file system                                 |
|      |                         | Create and manage archives and backups                     |
| 9.0  | Hardware Installation   |  |
| 9.1  | Device Drivers          | 2.2 Manage the file system                                 |

|      |                               | View disk space usage statistics      |
|------|-------------------------------|---------------------------------------|
|      |                               | view disk space usage statistics      |
| 9.2  | Kernel Module Management      | 1.4 Manage system processes           |
|      |                               | Manage kernel modules                 |
| 9.3  | Hotplug and Coldplug Devices  |                                       |
| 10.0 | Processes and System Services |                                       |
| 10.1 | Processes                     | 1.4 Manage system processes           |
|      |                               | Monitor and manage running processes  |
| 10.2 | Process Management            | 1.4 Manage system processes           |
|      |                               | Monitor and manage running processes  |
| 10.3 | Task Management               | 1.4 Manage system processes           |
|      |                               | Configure scheduled tasks             |
| 10.4 | Print Management              | 3.1 Configure networking and printing |
|      |                               | Configure and manage print jobs       |
| 10.5 | System Time Configuration     |                                       |
| 11.0 | System Monitoring             |                                       |
| 11.1 | System Logging                | 4.3 Monitor and manage system access  |

|      |                                   | Monitor logging   |  |
|------|-----------------------------------|---|--|
|      |                                   |   |  |
| 11.2 | Resource Monitoring               | 4.3 Monitor and manage system access  |  |
|      |                                   | Monitor logging   |  |
| 12.0 | Networking                        |   |  |
| 12.1 | IPv4 Overview                     |   |  |
| 12.2 | Network Interface Configuration   | 3.1 Configure networking and printing   |  |
|      |                                   | Enable or disable network interfaces Configure IP addresses Troubleshoot IP configuration |  |
| 12.3 | IPv6 Overview                     |   |  |
| 12.4 | Routing Configuration             |   |  |
| 12.5 | Hostname and DNS Configuration    |   |  |
| 12.6 | Linux Firewalls                   | 4.3 Monitor and manage system access  |  |
|      |                                   | Manage host firewall  |  |
| 12.7 | Network Troubleshooting           | 3.1 Configure networking and printing   |  |
|      |                                   | Troubleshoot IP configuration   |  |
| 13.0 | Cloud and Virtualization          |   |  |
| 13.1 | Cloud and Virtualization Overview |   |  |
| 13.2 | Virtual Machines                  |   |  |

| 13.3 | Virtual Networking                                |   |
|------|---|---|
| 14.0 | Scripting and Automation                          |   |
| 14.1 | Bash Shell Scripting                              |   |
| 14.2 | Shell Environments, Bash Variables and Parameters |   |
| 14.3 | Bash Scripting Logic                              |   |
| 14.4 | Version Control Using Git                         |   |
| 14.5 | Orchestration Processes and Concepts              |   |
| 15.0 | Security  |   |
| 15.1 | Root Usage  | 4.1 Manage users and groups   |
|      |   | Manage user access Switch users for access and elevated privilege   |
| 15.2 | User Security and Restriction                     |   |
| 15.3 | Login Blocking                                    |   |
| 15.4 | Network Security                                  | 1.5 Use package management  |
|      |   | Install, remove, and update packages with the RPM command Install, remove, and update RPM packages with DNF |
| 15.5 | The xinetd Super Daemon                           |   |
| 15.6 | OpenSSH   | 4.3 Monitor and manage system access  |
|      |   | Manage remote connections   |
| 15.7 | SSH Port Tunneling                                |   |

| 15.8  | Security-Enhanced Linux (SELinux)                            |                                      |
|-------|--|--------------------------------------|
| 15.9  | Application Armor (AppArmor)                                 |                                      |
| 15.10 | Public Key Authentication                                    | 4.3 Monitor and manage system access |
|       |  | Manage remote connections            |
| 15.11 | VPN Access and Authentication                                |                                      |
| 15.12 | Security Best Practices                                      |                                      |
| A.0   | TestOut Linux Pro Practice Exams                             |                                      |
| A.1   | Preparing for Certification                                  |                                      |
| A.2   | TestOut Linux Pro Domain Practice                            |                                      |
| B.0   | CompTIA Linux+ Practice Exams                                |                                      |
| B.1   | Preparing for Certification                                  |                                      |
| B.2   | CompTIA Linux+ XK0-004 Domain Practice (20 Random Questions) |                                      |
| B.3   | CompTIA Linux+ XK0-004 Domain Practice (All Questions)       |                                      |

# **Linux Pro Objective to LabSim Section**

The Linux Pro course and certification exam cover the following TestOut Linux Pro objectives:

| #   | Domain   | Module.Section                 |
|-----|--|--------------------------------|
| 1.0 | System Administration and Configuration  |                                |
| 1.1 | Use command-line utilities  Get help with Linux command-line utilities  View the contents of text files  | 2.2                            |
| 1.2 | Configure and use Linux shell environments  Manage environment variables  View available shells  | 2.1, 2.5                       |
| 1.3 | Manage system startup and shutdown  Manage bootloader configurations View and manage runlevels or boot targets for system services Set the default system runlevel or boot target Shut down and restart the system | 4.2, 4.3, 4.5                  |
| 1.4 | Manage system processes  Start, stop, and restart system services Monitor and manage running processes Manage kernel modules   | 4.4<br>9.2<br>10.1, 10.2, 10.3 |

## Objective Mappings — TestOut Linux Pro – English 5.0.x

|     | Configure scheduled tasks  |  |
|-----|--|--|
| 1.5 | Use package management  Install, remove, and update packages with the RPM command Install, remove, and update RPM packages with DNF  | 6.1, 6.2<br>15.4                               |
| 2.0 | Storage and File System Management   |  |
| 2.1 | Manage storage devices  Create and manage disk partitions Create and manage disk file systems Mount and unmount devices in the file system Create and manage swap partitions Configure Logical Volume management   | 8.1, 8.2, 8.3, 8.4, 8.5                        |
| 2.2 | View information about directories and files in the file system Use the Linux Filesystem Hierarchy Standard Create, copy, move, and delete directories in the file system Create, copy, move, and delete files in the file system Create and manage hard and symbolic link files View disk space usage statistics Implement disk quotas Create and manage archives and backups | 0.1<br>2.3, 2.8, 2.9, 2.10<br>8.7, 8.12<br>9.1 |
| 3.0 | Networking and Printing  |  |
| 3.1 | Configure networking and printing  Enable or disable network interfaces  Configure IP addresses  | 10.4<br>12.2, 12.7                             |

## Objective Mappings — TestOut Linux Pro – English 5.0.x

|     | Troubleshoot IP configuration Configure and manage print jobs  |                                   |
|-----|--|-----------------------------------|
| 4.0 | Security and Access Control  |                                   |
| 4.1 | Manage users and groups  | 7.1, 7.2, 7.3<br>15.1             |
|     | Create and manage groups Create and manage user accounts Manage user passwords Manage user access Switch users for access and elevated privilege   |                                   |
| 4.2 | Manage user and group access  Manage directory and file ownership for users and groups Manage directory and file permissions for users and groups Configure umask values Use special permissions | 8.8, 8.9, 8.10, 8.11              |
| 4.3 | Monitor and manage system access  Monitor logging Manage host firewall Manage remote connections   | 11.1, 11.2<br>12.6<br>15.6, 15.10 |

# **LabSim Section to XK0-004 Objective**

| Section | Title                     | Objectives   |
|---------|---------------------------|--|
| 0.0     | Linux Pro Introduction    |  |
| 0.1     | Course Introduction       |  |
| 0.2     | The TestOut Lab Simulator |  |
| 1.0     | Linux Overview            |  |
| 1.1     | Linux Introduction        | 2.5 Summarize and explain server roles.  NTP SSH Web Certificate authority Name server DHCP SNMP File servers Authentication server Proxy Logging Containers VPN Monitoring Database Print server Mail server Load balancer Clustering |

| 2.0 | Using Linux           |  |
|-----|-----------------------|--|
| 2.1 | The Linux Shell       |  |
| 2.2 | Linux Help            |  |
| 2.3 | Text Editors          | 2.3 Given a scenario, create, modify, and redirect files.  Text editors  nano vi   |
| 2.4 | Aliases               | 2.2 Given a scenario, manage users and groups.  Profiles  Bash parameters: User entries: .bashrc Bash parameters: User entries: .bash_profile Bash parameters: User entries: .profile Bash parameters: Global entries: /etc/profile.d/ Bash parameters: Global entries: /etc/profile |
| 2.5 | Environment Variables | 2.2 Given a scenario, manage users and groups.  Profiles  Bash parameters: User entries: .bashrc Bash parameters: User entries: .bash_profile Bash parameters: User entries: .profile Bash parameters: Global entries: /etc/bashrc Bash parameters: Global entries: /etc/profile.d/  |

|     |  | Bash parameters: Global entries: /etc/profile  5.1 Given a scenario, deploy and execute basic BASH scripts.  Shell environments and shell variables  PATH Global Local export env set printenv echo   |
|-----|--|---|
| 2.6 | Shell Configuration Files                    | 2.2 Given a scenario, manage users and groups.  Profiles  Bash parameters: User entries: .bashrc Bash parameters: User entries: .bash_profile Bash parameters: User entries: .profile Bash parameters: Global entries: /etc/bashrc Bash parameters: Global entries: /etc/profile.d/ Bash parameters: Global entries: /etc/profile |
| 2.7 | Redirection, Piping and Command Substitution | 2.3 Given a scenario, create, modify, and redirect files.  Output redirection /li >     << >> >>  |

|     |             | 2>   |
|-----|-------------|--|
| 2.8 | Directories | 2.3 Given a scenario, create, modify, and redirect files.  File and directory operations  mv  cp  rm  ls  mkdir  rmdir |
| 2.9 | Files       | 2.3 Given a scenario, create, modify, and redirect files.  File readers  |

## Objective Mappings — TestOut Linux Pro – English 5.0.x

|      |                                     | cat tail head less more  File and directory operations  touch mv cp rm   |
